Driven and innovative Software Developer with a Bachelor's in Computer Science, excelling in fast-paced, tech-forward environments. Passionate about AI and Big Data, with a deep curiosity for exploring and mastering emerging technologies. A problem solver by nature, consistently seeking new challenges to apply analytical skills and deliver impactful solutions.

Education

University of Padua, Bachelor's degree in Computer Science Sept 2019 – Dec 2022

- Grade: 103/110 (openbadges.bestr.it/public/assertions/marco-bustaffa)

University of Padua, Master's degree in Data Science Sept 2023 – Ongoing

Experience

Software Developer, Tec Systems Engineering S.r.l June 2021 – October 2022

- Maintained and optimised an OpenVPN network, ensuring secure and reliable communication across systems.
- Developed and maintained backend components in Java, contributing to key modules that supported business operations.
- Refined the company's technical product strategy introducing the company to Cloud Native concepts, outlining a detailed roadmap for migrating from a monolithic architecture to a microservices-based system. This initiative projected a 20% reduction in maintenance costs, a 30% increase in application availability, and a 30% improvement in scalability
- Worked directly with the Head of R&D on researching and implementing innovative technologies. Implemented Hadoop HDFS to store files using the Apache Parquet format, reducing overall required space by more than 70% and improving query speed by 30%
- Developed a module for exchanging vehicular traffic data between Tescen and Enel X, enhancing cross-system data communication.

Projects

Bona e Gava github.com/Bona-Gava

As part of a group assignment, I collaborated with my peers to develop an accessible e-commerce website using only native technologies such as HTML, JavaScript, PHP, and CSS. The website was designed to showcase and sell furniture items from a local business owned by the parents of one of my group members.

Throughout the project, we placed a strong emphasis on ensuring that the website was accessible to users of all abilities. This involved using semantic HTML, providing alternative text for images, implementing appropriate color contrast, enabling keyboard navigation, and incorporating ARIA attributes.

By completing this project, I gained valuable experience in web development and accessibility best practices. I learned how to work collaboratively in a group, as well as how to use a range of native web technologies to create a fully functional e-commerce website.

Login Warrior github.com/Club-Swendwich

As part of my university coursework in Software Engineering, my team and I were presented with a challenging project. Our task was to work with an external business to create a software application from scratch. The project, dubbed "Login Warrior," involved analyzing a massive dataset of login records and creating a visualization of suspicious login attempts.

To bring this project to life, we utilized React and WebGL, a powerful graphics library. This allowed us to effectively plot and represent all of the data in a visually appealing and user-friendly way. Throughout the project, I gained valuable experience in software development and project management. Working with a team, I honed my

communication and collaboration skills, as well as my ability to create thorough documentation and high-quality code. I also developed a deeper understanding of how to use technologies like React and WebGL to create impactful software applications that solve real-world problems. Overall, the "Login Warrior" project was a challenging and rewarding experience that helped prepare me for a successful career in software engineering.

Digital Skills

Python, Java, SQL, C++ , Linux, Git, HTML5/CSS, Javascript, NoSQL (MongoDB, InfluxDB), Apache Hadoop, Apache Spark, Docker, R
